

## HeadMaster 11.5.1.16 Release Notes

We recommend updating to HeadMaster 11.5.1.16, which offers the following enhancement and corrections.

# HeadMaster Online Change Requests

We've made important updates to change requests. Be sure to download this release before completing change requests. Otherwise, they may not process correctly.

We fixed these issues that affected some customers:

- If your school creates a custom field and customizes the enrollment form in HeadMaster Online to include it, this field is required, even for non-participating students or parents.
- When a parent submits a New Family Application in HeadMaster Online, the program did not accept some required fields, even if those fields were selected and completed.
- When a parent made a payment in the HeadMaster mobile app, *Server Error in ' Application* displayed.
