

"DBISAM engine error 11010 table does not exist awcbpc" displays when uploading

Problem

When trying to upload in Access ACS, this error displays:

"DBISAM engine error 11010 table does not exist awcbpc."

Products affected: Access ACS

Versions affected: Any

Solution

Remove all files in the **X:/acsnet/acldata/acesacs** directory (**X** represents your server drive letter).

After removing these files, you should be able to upload without any errors.

If you're uploading Tax Statements, reprocess the Access ACS Tax Statements import in ACS desktop.
