

# DataShare

DataShare lets you synchronize and share people data such as names, addresses, and other information. This improves the accuracy of your church and organizational databases, creates a greater resource for ministry, saves you time by not having to manually update records, and allows you to send more accurate mailings.

## Who Uses DataShare

Using ACS People, DataShare helps Catholic and Episcopalian diocese to share information about their parishioners within the diocesan structure.

 **Note**

DataShare is only available for purchase by a diocese. Churches and parishes under a diocese that have purchased the software can request to connect to their diocese via DataShare.
