

Facility Scheduler Release Notes - August 2012

We are pleased to announce a new feature that we know you have been waiting for: **Mass Delete!**

Is it time to clean up your calendars? Do you want to remove old or unwanted events, but have too many to delete individually? Using Mass Delete, you can run a query and delete multiple events directly from the query results! You can also set permissions for Mass Delete to protect against accidental or unwanted data loss.

Mass Delete

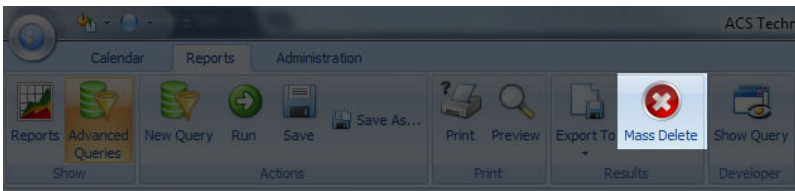

✓ Facility Scheduler's mass delete is here!

? Unknown Attachment

? Unknown Attachment

This new feature includes the following changes:

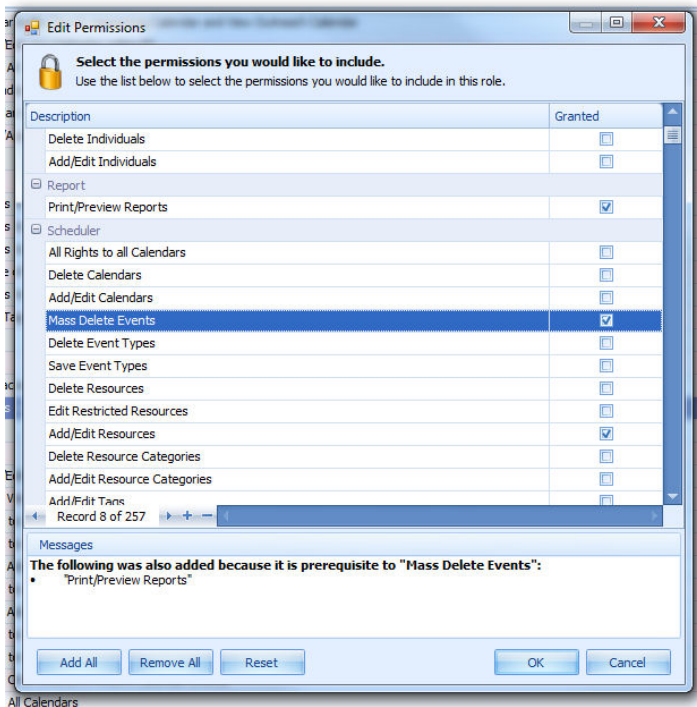

- The **Results** group on the **Reports** tab now includes a **Mass Delete** button.
- You can now run a query and delete multiple events from the query results.

The new Mass Delete button

Mass Delete Permissions

✓ You can choose which roles have permissions to conduct a mass delete. You can assign these permissions to any role from the **Administration** tab.

Setting Mass Delete permissions

! The delete log feature [released in Facility Scheduler's July update](#) is fully compatible with mass delete. You can use the log to view details about which events were deleted and when the delete was processed.

For more information, please see the [Mass Delete documentation](#).

Corrections

Summary	Status
An event's start and end times can't be the same, even if the event starts and ends on a different day.	Resolved
When adding or editing events, event detail information does not always display correctly in the Windows medium 125% display setting.	Resolved
